***Claim Objections***

Claims 54,56,76,78-83,85-99 are objected to because of the following informalities: The recitation "providing a dielectric onto said first conductive layer" seems to be inconsistent with the recitation "providing a second conductive layer adjacent the first conductive layer", because adjacent would indicate that the second conductor is next to the first conductive layer, so that it seems the dielectric would not be on the first conductive layer. The specification on page 10, lines 5-9, second paragraph, seems to support the dielectric layer over rather than on the first conductive layer and on the second conductive layer, which is on the first conductive layer. Clarification is requested. Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 83 and 86 are rejected under 35 U.S.C. 102(e) as being anticipated by Hintermaier, et al. (US 6,100,187)("Hintermaier").

Hintermaier discloses the steps of forming a conductive layer 30(col. 7, lines 1-2 and Fig. 3) and treating the layer with PH<sub>3</sub> and the layer may be W(col. 4, lines 33-41).

Then a dielectric layer is deposited(col. 7, lines 30-35). The second conductive layer formed after the treatment of the first conductive layer is interpreted to be the portion of the first conductive layer which is reacted to form layer 30a shown in Fig. 3. The layer 30b is the remaining unreacted portion of the first conductive layer. This is done to prevent the oxidation of the first conductive layer(col. 1, lines 60-67).

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
